

## Program Description

This program has been designed to meet the needs of practicing ophthalmologists who are engaged in the diagnosis and treatment of eye diseases. The program content will emphasize several topics that are included in the American Academy of Ophthalmology's 10 Practice Emphasis Areas (PEAs) that have been defined by the American Board of Ophthalmology (ABO).

The expected result of this program is a broad array of increased ophthalmic knowledge in the community, a desire for practitioners to pursue lifelong learning, the refinement of already employed techniques or skills, and the application of new techniques or skills for the improvement of practice and patient care.

## Educational Objectives

### Attendees should be able to:

- Practice the skills and knowledge indicated by the AAO Practice Emphasis Areas (PEAs).
- Utilize new tools in imaging for Uveitis and integrate them into the ophthalmic practice.
- Identify the top 10 common misconceptions in the diagnosis and management of ocular tumors and be able to recognize and correctly treat to improve patient care.
- Determine points in the process of care when a surgical checklist is needed; examine the ophthalmic-specific protocol developed by eye organizations; and develop a plan to implement the protocols in all settings.
